

Reverse Engineering for Documentation and Computer Modeling

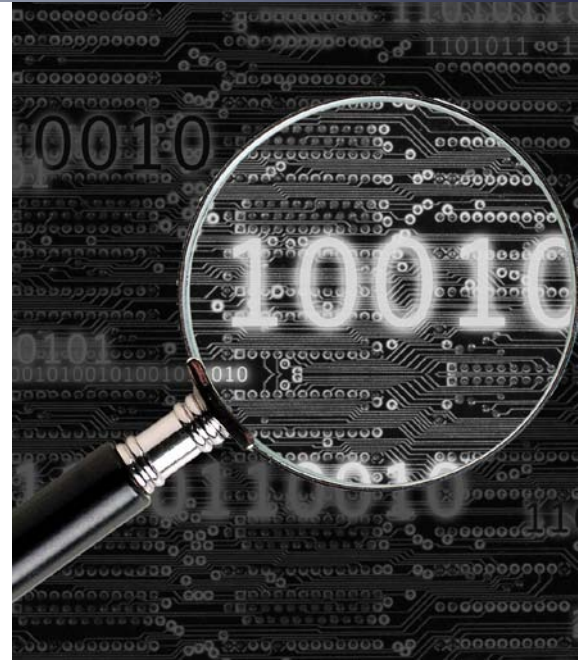

Generate computer models quickly and easily

Impact Technologies has the equipment and expertise to acquire the measurements needed to produce reverse engineering documentation for generating computer models quickly and easily.

Using a portable articulated Coordinate Measuring Machine, one can take measurements virtually anywhere in an 8-foot sphere. The lightweight equipment readily adapts to field measurements, where a traditional CMM cannot fit.

The CAD files are saved in the SAT or IGES format. Entering the data into the premier analytical ANSYS® software produces accurate geometry files to run various engineering analyses, and 'what-if' studies.
